

Brunei LNG

Realising their objectives

Our Singapore office has been awarded a contract by Brunei LNG Sendirian Berhad (BLNG) for the FEED of a 45 MW power plant in Lumut, Brunei Darussalam.

“We enter into this relationship with Foster Wheeler with high expectations, and in particular, that Foster Wheeler will continue its outstanding standard of HSE performance, whilst ensuring quality and cost-efficiency throughout the entire project.”

“We also look forward to Foster Wheeler maximising local business development as promised, through the active participation of the local companies they have identified as their collaborative partners, and the wider business community in Brunei.”

“BLNG have started with the first major projects from the Asset Reference Plan of which the Power Project is a most important one. Completion of phase one of this project in 2007 shall reinforce the basis of a reliable power system in BLNG. It will be a platform from which further rejuvenation works can be undertaken.”

Gilbert Habets
Engineering Manager, BLNG

The power project will include a new combined-cycle power plant to replace the existing gas and steam turbine generators which are approaching the end of their design life.

This award is an important first step in building a successful long-term relationship not only with BLNG, but also with the local community.

We bring not only our power experience for this particular project, but also our considerable LNG liquefaction experience and expertise from successful projects such as the Malaysian Dua and Tiga projects for PETRONAS in Bintulu and the Oman and Qalhat LNG projects in the Middle East.

“We are delighted to be involved in this important project, which is the second major activity under our client’s Asset Reference Plan. This plan forms part of BLNG’s strategy to extend the life of its LNG plant for another 30 years and ensure long-term, reliable supply of LNG to its customers, well beyond the existing contract expiry date of 2013. We are fully committed to working with BLNG to help realise these objectives.”
